MADE IN ITALY

M A D E I N I T A L Y

Evolution

This kart is 2.1 m long, 1.3 m high with a wheelbase of 1.15 m and a 32 x 2 diameter tubular frame made from chromium molybdenum steel.

The side bumpers are mounted on a counter-frame (with two running boards to help passengers to get in and out) which is attached to the main frame with vibration dampers.

The front and rear bumpers are made from high impact-absorbing polyethylene.

The rear bumper is also mounted on vibration dampers.

There are also two polythene wings protecting the cowlings and wheels.

The one-piece rims are made from extra-thick aluminium.

Nylon steering arms.

Steel spindles with 17 diameter interchangeable pin.

A special feature of our kart is that the engine is mounted behind the seat. This makes the kart narrower and prevents users from getting dirty or burning themselves. The engine is also protected by a rear spoiler.

Powered by Honda 200 6.5 hp and 270 9.0 hp
